← BACK TO PROJECT

KINDLY · NEW DOOR

WHAT DOES THIS DOOR OPEN?

01 **PROJECT OPENER**
Open an editor, start local services, open the app.

02 **JS SCRIPT**
A .js file run by the app. Edit it here, run it from the card.

03 **FLOW**
A workflow built in KOMA/flow, saved as a one-click door.

04 **LINK**
Bitbucket, Jira, dashboards — any URL.

NAME
Standup from Jira

SHORTCUT
⌘6

SCRIPT FILE
scripts/standup.js

RUNTIME
Node 22 · project cwd

STARTS FROM TEMPLATE

Blank
`export default async (ctx)`

Shell chain
`ctx.sh`…``

HTTP call
`ctx.fetch + env`

- [x] Ask before running (script can write files)

Creates scripts/standup.js in the project repo.

STANDUP FROM JIRA

~/Work/kindly/.doors/scripts/standup.js · saved

OPEN IN CURSOR

▶ RUN · ⌘↵

standup.js | door.json | .env.local

```
1  // Standup from Jira — Kindly
2  import { defineDoor } from '@koma/doors'
3
4  export default defineDoor({
5    name: 'Standup from Jira',
6    inputs: { days: { type: 'number', default: 1 } },
7    async run(ctx, { days }) {
8      const issues = await ctx.jira.search(
9        `assignee = currentUser() AND updated ≥ -${days}d`
10     )
11     const log = await ctx.sh`git log --since=${days}.days --oneline`
12
13     const text = [
14       '*Yesterday*',
15       ...issues.map(i => `• ${i.key} ${i.summary}`),
16       '*Commits*', log.stdout,
17     ].join('\n')
18
19     await ctx.clipboard.write(text)
20     ctx.notify('Standup copied')
21   },
```

OUTPUT run #31 · today 09:12 · 1.4s ✓ exit 0

```
▸ standup.js { days: 1 }
jira.search → 4 issues
sh: git log --since=1.days --oneline → 6 lines
clipboard.write → 412 chars
✓ notify “Standup copied”
```
